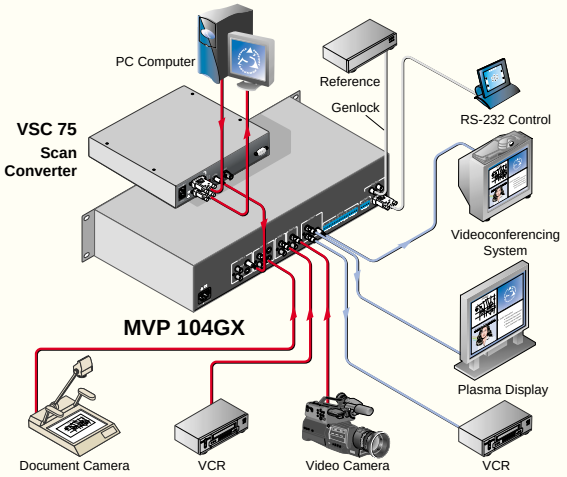
Freeze control
User selectable input and preset custom labeling
Factory and user presets
Independent horizontal & vertical sizing, positioning, and blanking controls for each window
Genlock
RS-232/422 control
Internal power supply
Composite video and S-video inputs
Simultaneous composite and S-video multi-image outputs
Built-in stereo audio switcher

Extron® MVP 104GX

Open More Windows to the Videoconferencing World

Extron's MVP 104GX multi-video processor allows a user to display up to four video signals simultaneously on a single screen in multiple ways. In videoconferencing and distance learning applications, the MVP 104GX enables participants at the far end to view multiple images on one screen for more powerful and effective communications. These images can be routed from sources such as document cameras, codec cameras, VCRs, or DVD players. The MVP 104GX offers the following advantages:

- Accepts up to four video inputs: two inputs accept composite or S-video and two inputs accept composite video only
- Compatible with NTSC or PAL signals
- Genlock capability for systems that require synchronous timing
- Video windows may be independently sized, positioned, or overlapped in output display combinations of one, two, three, or four windows
- 44 factory and user presets
- Three simultaneous multi-image outputs: two composite video outputs on BNC connectors and one S-video output on a 4-pin mini-DIN connector
- Four input, one output stereo audio switching for selecting the audio from any video input



Output Examples

E-DEMO
